### VOLUME I. Foundations and Vanilla Models

---

#### Part I Foundations

---

<b>1</b>	<b>Introduction to Arbitrage Pricing Theory</b>	<b>3</b>
1.1	The Setup	3
1.2	Trading Gains and Arbitrage	7
1.3	Equivalent Martingale Measures and Arbitrage	8
1.4	Derivative Security Pricing and Complete Markets	10
1.5	Girsanov's Theorem	11
1.6	Stochastic Differential Equations	13
1.7	Explicit Trading Strategies and PDEs	15
1.8	Kolmogorov's Equations and the Feynman-Kac Theorem	16
1.9	Black-Scholes and Extensions	19
1.9.1	Basics	19
1.9.2	Alternative Derivation	23
1.9.3	Extensions	24
1.9.3.1	Deterministic Parameters and Dividends	24
1.9.3.2	Stochastic Interest Rates	25
1.10	Options with Early Exercise Rights	27
1.10.1	The Markovian Case	28
1.10.2	Some General Bounds	30
1.10.3	Early Exercise Premia	32

<b>2</b>	<b>Finite Difference Methods</b>	39
2.1	1-Dimensional PDEs: Problem Formulation	39
2.2	Finite Difference Discretization	41
2.2.1	Discretization in $x$ -Direction. Dirichlet Boundary Conditions	41
2.2.2	Other Boundary Conditions	43
2.2.3	Time-Discretization	44
2.2.4	Finite Difference Scheme	45
2.3	Stability	47
2.3.1	Matrix Methods	47
2.3.2	Von Neumann Analysis	48
2.4	Non-Equidistant Discretization	51
2.5	Smoothing and Continuity Correction	52
2.5.1	Crank-Nicolson Oscillation Remedies	52
2.5.2	Continuity Correction	53
2.5.3	Grid Shifting	54
2.6	Convection-Dominated PDEs	55
2.6.1	Upwinding	56
2.6.2	Other Techniques	57
2.7	Option Examples	57
2.7.1	Continuous Barrier Options	57
2.7.2	Discrete Barrier Options	59
2.7.3	Coupon-Paying Securities and Dividends	60
2.7.4	Securities with Early Exercise	61
2.7.5	Path-Dependent Options	62
2.7.6	Multiple Exercise Rights	64
2.8	Special Issues	65
2.8.1	Mesh Refinements for Multiple Events	65
2.8.2	Analytics at the Last Time Step	68
2.8.3	Analytics at the First Time Step	70
2.9	Multi-Dimensional PDEs: Problem Formulation	71
2.10	Two-Dimensional PDE with No Mixed Derivatives	72
2.10.1	Theta Method	72
2.10.2	The Alternating Direction Implicit (ADI) Method	73
2.10.3	Boundary Conditions and Other Issues	76
2.11	Two-Dimensional PDE with Mixed Derivatives	76
2.11.1	Orthogonalization of the PDE	77
2.11.2	Predictor-Corrector Scheme	79
2.12	PDEs of Arbitrary Order	81
<b>3</b>	<b>Monte Carlo Methods</b>	83
3.1	Fundamentals	83
3.1.1	Generation of Random Samples	85
3.1.1.1	Inverse Transform Method	86
3.1.1.2	Acceptance-Rejection Method	87
3.1.1.3	Composition	88
3.1.2	Correlated Gaussian Samples	90
3.1.2.1	Cholesky Decomposition	90
3.1.2.2	Eigenvalue Decomposition	91

3.1.3	Principal Components Analysis (PCA) . . . . .	92
3.2	Generation of Sample Paths . . . . .	93
3.2.1	Example: Asian Basket Options in Black-Scholes Economy . . . . .	93
3.2.2	Discretization Schemes, Convergence, and Stability . . .	95
3.2.3	The Euler Scheme . . . . .	97
	3.2.3.1 Linear-Drift SDEs . . . . .	98
	3.2.3.2 Log-Euler Scheme . . . . .	98
3.2.4	The Implicit Euler Scheme . . . . .	99
	3.2.4.1 Implicit Diffusion Term . . . . .	100
3.2.5	Predictor-Corrector Schemes . . . . .	101
3.2.6	Ito-Taylor Expansions and Higher-Order Schemes . . . .	102
	3.2.6.1 Ordinary Taylor Expansion of ODEs . . . . .	102
	3.2.6.2 Ito-Taylor Expansions . . . . .	103
	3.2.6.3 Milstein Second-Order Discretization Scheme . . . . .	105
3.2.7	Other Second-Order Schemes . . . . .	106
3.2.8	Bias vs. Monte Carlo Error . . . . .	107
3.2.9	Sampling of Continuous Process Extremes . . . . .	109
3.2.10	PCA and Bridge Construction of Brownian Motion Paths . . . . .	112
	3.2.10.1 Brownian Bridge and Quasi-Random Sequences . . . . .	112
	3.2.10.2 PC Construction . . . . .	113
3.3	Sensitivity Computations . . . . .	115
3.3.1	Finite Difference Estimates . . . . .	115
	3.3.1.1 Black-Scholes Delta . . . . .	115
	3.3.1.2 General Case . . . . .	117
3.3.2	Pathwise Estimate . . . . .	118
	3.3.2.1 Black-Scholes Delta . . . . .	118
	3.3.2.2 General Case . . . . .	119
	3.3.2.3 Sensitivity Path Generation . . . . .	120
3.3.3	Likelihood Ratio Method . . . . .	121
	3.3.3.1 Black-Scholes Delta . . . . .	121
	3.3.3.2 General Case . . . . .	122
	3.3.3.3 Euler Schemes . . . . .	123
	3.3.3.4 Some Remarks . . . . .	124
3.4	Variance Reduction Techniques . . . . .	124
3.4.1	Variance Reduction and Efficiency . . . . .	125
3.4.2	Antithetic Variates . . . . .	126
	3.4.2.1 The Gaussian Case . . . . .	126
	3.4.2.2 General Case . . . . .	127
3.4.3	Control Variates . . . . .	127
	3.4.3.1 Basic Idea . . . . .	127
	3.4.3.2 Non-Linear Controls . . . . .	129
3.4.4	Importance Sampling . . . . .	130
	3.4.4.1 Basic Idea . . . . .	130
	3.4.4.2 Density Formulation . . . . .	131
	3.4.4.3 Importance Sampling and SDEs . . . . .	132

## XIV Preface

	3.4.4.4	More on SDE Path Simulation . . . . .	133
	3.4.4.5	Rare Event Simulation and Linearization . .	135
3.5		Some Notes on Bermudan Security Pricing . . . . .	138
	3.5.1	Basic Idea . . . . .	138
	3.5.2	Parametric Lower Bound Methods . . . . .	139
	3.5.3	Parametric Lower Bound: An Example . . . . .	140
	3.5.4	Regression-Based Lower Bound . . . . .	141
	3.5.5	Upper Bound Methods . . . . .	142
	3.5.6	Confidence Intervals . . . . .	143
	3.5.7	Other Methods . . . . .	144
3.A		Appendix: Constants for $\Phi^{-1}$ Algorithm . . . . .	144
<b>4</b>		<b>Fundamentals of Interest Rate Modeling . . . . .</b>	<b>145</b>
4.1		Fixed Income Notations . . . . .	145
	4.1.1	Bonds and Forward Rates . . . . .	145
	4.1.2	Futures Rates . . . . .	147
	4.1.3	Annuity Factors and Par Rates . . . . .	148
4.2		Fixed Income Probability Measures . . . . .	149
	4.2.1	Risk Neutral Measure . . . . .	149
	4.2.2	$T$ -Forward Measure . . . . .	151
	4.2.3	Spot Measure . . . . .	152
	4.2.4	Terminal and Hybrid Measures . . . . .	153
	4.2.5	Swap Measures . . . . .	154
4.3		Multi-Currency Markets . . . . .	155
	4.3.1	Notations and FX Forwards . . . . .	155
	4.3.2	Risk Neutral Measures . . . . .	156
	4.3.3	Other Measures . . . . .	157
4.4		The HJM Analysis . . . . .	157
	4.4.1	Bond Price Dynamics . . . . .	157
	4.4.2	Forward Rate Dynamics . . . . .	158
	4.4.3	Short Rate Process . . . . .	159
4.5		Examples of HJM Models . . . . .	160
	4.5.1	The Gaussian Model . . . . .	160
	4.5.2	Gaussian HJM Models with Markovian Short Rate . .	163
	4.5.3	Log-Normal HJM Models . . . . .	164
<b>5</b>		<b>Fixed Income Instruments . . . . .</b>	<b>167</b>
5.1		Fixed Income Markets and Participants . . . . .	167
5.2		Certificates of Deposit and Libor Rates . . . . .	170
5.3		Forward Rate Agreements (FRA) . . . . .	170
5.4		Eurodollar Futures . . . . .	171
5.5		Fixed-for-Floating Swaps . . . . .	172
5.6		Libor-in-Arrears Swaps . . . . .	175
5.7		Averaging Swaps . . . . .	175
5.8		Caps and Floors . . . . .	176
5.9		Digital Caps and Floors . . . . .	177
5.10		European Swaptions . . . . .	178
	5.10.1	Cash-Settled Swaptions . . . . .	179
5.11		CMS Swaps, Caps and Floors . . . . .	180

5.12	Bermudan Swaptions .....	181
5.13	Exotic Swaps and Structured Notes .....	182
5.13.1	Libor-Based Exotic Swaps .....	183
5.13.2	CMS-Based Exotic Swaps .....	184
5.13.3	Multi-Rate Exotic Swaps .....	184
5.13.4	Range Accruals .....	185
5.13.5	Path-Dependent Swaps .....	186
5.14	Callable Libor Exotics .....	187
5.14.1	Definitions .....	187
5.14.2	Pricing Callable Libor Exotics .....	189
5.14.3	Types of Callable Libor Exotics .....	189
5.14.4	Callable Snowballs .....	189
5.14.5	CLEs Accreting at Coupon Rate .....	189
5.14.6	Multi-Tranches .....	190
5.15	TARNs and Other Trade-Level Features .....	190
5.15.1	Knock-out Swaps .....	191
5.15.2	TARNs .....	191
5.15.3	Global Cap .....	192
5.15.4	Global Floor .....	192
5.15.5	Pricing and Trade Representation Challenges .....	192
5.16	Volatility Derivatives .....	193
5.16.1	Volatility Swaps .....	193
5.16.2	Volatility Swaps with a Shout .....	194
5.16.3	Min-Max Volatility Swaps .....	194
5.16.4	Forward Starting Options and Other Forward Volatility Contracts .....	195
5.A	Appendix: Day Counting Rules and Other Trivia .....	196
5.A.1	Libor Rate Definitions .....	196
5.A.2	Swap Payments .....	197

---

## Part II Vanilla Models

---

<b>6</b>	<b>Yield Curve Construction and Risk Management .....</b>	<b>201</b>
6.1	Notations and Problem Definition .....	202
6.1.1	Discount Curves .....	202
6.1.2	Matrix Formulation .....	203
6.1.3	Construction Principles and Yield Curves .....	204
6.2	Yield Curve Fitting with $N$ -Knot Splines .....	205
6.2.1	$C^0$ Yield Curves: Bootstrapping .....	206
6.2.1.1	Piecewise Linear Yields .....	206
6.2.1.2	Piecewise Flat Forward Rates .....	208
6.2.2	$C^1$ Yield Curves: Hermite Splines .....	208
6.2.3	$C^2$ Yield Curves: Twice Differentiable Cubic Splines ..	211
6.2.4	$C^2$ Yield Curves: Twice Differentiable Tension Splines	213
6.3	Non-Parametric Optimal Yield Curve Fitting .....	214
6.3.1	Norm Specification and Optimization .....	215
6.3.2	Choice of $\lambda$ .....	218
6.3.3	Example .....	219

6.4	Managing Yield Curve Risk . . . . .	219
6.4.1	Par-Point Approach . . . . .	221
6.4.2	Forward Rate Approach . . . . .	221
6.4.3	From Risks to Hedging: The Jacobian Approach . . . . .	223
6.4.4	Cumulative Shifts and other Common Tricks . . . . .	225
6.5	Various Topics in Discount Curve Construction . . . . .	227
6.5.1	Curve Overlays and Turn-of-Year Effects . . . . .	227
6.5.2	Cross-Currency Curve Construction . . . . .	228
6.5.2.1	Basic Problem . . . . .	228
6.5.2.2	Separation of Discount and Forward Rate Curves . . . . .	228
6.5.2.3	Cross-Currency Basis Swaps . . . . .	230
6.5.2.4	Modified Curve Construction Algorithm . . . . .	232
6.5.3	Tenor Basis and Multi-Index Curve Group Construction . . . . .	233
6.A	Appendix: Spline Theory . . . . .	237
6.A.1	Hermite Spline Theory . . . . .	237
6.A.2	$C^2$ Cubic Splines . . . . .	239
6.A.3	$C^2$ Exponential Tension Splines . . . . .	240
<b>7</b>	<b>Vanilla Models with Local Volatility . . . . .</b>	<b>243</b>
7.1	General Framework . . . . .	243
7.1.1	Model Dynamics . . . . .	243
7.1.2	Volatility Smile and Implied Density . . . . .	244
7.1.3	Choice of $\varphi$ . . . . .	245
7.2	CEV Model . . . . .	245
7.2.1	Basic Properties . . . . .	245
7.2.2	Call Option Pricing . . . . .	247
7.2.3	Regularization . . . . .	249
7.2.4	Displaced Diffusion Models . . . . .	249
7.3	Quadratic Volatility Model . . . . .	251
7.3.1	Case 1: Two Real Roots to the Left of $S(0)$ . . . . .	252
7.3.2	Case 2: One Real Root to the Left of $S(0)$ . . . . .	255
7.3.3	Extensions and Other Root Configurations . . . . .	255
7.4	Finite Difference Solutions for General $\varphi$ . . . . .	256
7.4.1	Multiple $\lambda$ and $T$ . . . . .	257
7.4.2	Forward Equation for Call Options . . . . .	257
7.5	Asymptotic Expansions for General $\varphi$ . . . . .	259
7.5.1	Expansion around Displaced Log-Normal Process . . . . .	259
7.5.2	Expansion around Gaussian Process . . . . .	262
7.6	Extensions to Time-Dependent $\varphi$ . . . . .	262
7.6.1	Separable Case . . . . .	263
7.6.2	Skew Averaging . . . . .	263
7.6.2.1	Examples . . . . .	266
7.6.2.2	A Caveat . . . . .	268
7.6.3	Skew and Convexity Averaging by Small-Noise Expansion . . . . .	269
7.6.4	Numerical Example . . . . .	273

<b>8</b>	<b>Vanilla Models with Stochastic Volatility I</b>	275
8.1	Model Definition	275
8.2	Model Parameters	277
8.3	Basic Properties	278
8.4	Fourier Integration	282
8.4.1	General Theory	283
8.4.2	Applications to SV Model	286
8.4.3	Numerical Implementation	288
8.4.4	Numerical Implementation, Refinements	290
8.4.5	Fourier Integration for Arbitrary European Payoffs	293
8.5	Variance FFT and Generalizations	296
8.6	CEV-Type Stochastic Volatility Models and SABR	300
8.7	Numerical Examples: Statics	301
8.8	Numerical Examples: Dynamics	302
8.9	Hedging in Stochastic Volatility Models	306
8.9.1	Hedge Construction, Delta and Vega	306
8.9.2	Minimum Variance Delta Hedging	309
8.9.3	Minimum Variance Hedging: an Example	311
8.A	Appendix: General Volatility Processes	312
<b>9</b>	<b>Vanilla Models with Stochastic Volatility II</b>	315
9.1	Fourier Integration with Time-Dependent Parameters	315
9.2	Asymptotic Expansion with Time-Dependent Volatility	318
9.3	Averaging Methods	322
9.3.1	Volatility Averaging	322
9.3.2	Skew Averaging	324
9.3.3	Volatility of Variance Averaging	325
9.3.4	Calibration by Parameter Averaging	327
9.4	PDE Method	331
9.4.1	PDE Formulation	331
9.4.2	Range for Stochastic Variance	331
9.4.3	Discretizing Stochastic Variance	332
9.4.4	Boundary Conditions for Stochastic Variance	333
9.4.5	Range for Underlying	335
9.4.6	Discretizing the Underlying	335
9.5	Monte Carlo Method	336
9.5.1	Exact Simulation of Variance Process	336
9.5.2	Biased Taylor-Type Schemes for Variance Process	337
9.5.2.1	Euler Schemes	337
9.5.2.2	Higher-Order Schemes	338
9.5.3	Moment Matching Schemes for Variance Process	338
9.5.3.1	Log-normal Approximation	338
9.5.3.2	Truncated Gaussian	339
9.5.3.3	Quadratic-Exponential	340
9.5.3.4	Summary of QE algorithm	342
9.5.4	Broadie-Kaya Scheme for the Underlying	342
9.5.5	Other Schemes for the Underlying	343
9.5.5.1	Taylor-Type Schemes	343
9.5.5.2	Simplified Broadie-Kaya	344

XVIII Preface

9.5.5.3	Martingale Correction . . . . .	344
9.A	Appendix: Proof of Proposition 9.3.4 . . . . .	344
9.B	Appendix: Coefficients for Asymptotic Expansion . . . . .	348

---

## VOLUME II. Term Structure Models

---

### Part III Term Structure Models

---

<b>10 One-Factor Short Rate Models I</b>	353
10.1 The One-Factor Gaussian Short Rate Model	353
10.1.1 The Ho-Lee Model	354
10.1.1.1 Notations and First Steps	354
10.1.1.2 Fitting the Term Structure of Discount Bonds	355
10.1.1.3 Analysis and Comparison with HJM Approach	356
10.1.2 The Mean-Reverting GSR Model	358
10.1.2.1 The Vasicek Model	358
10.1.2.2 The General One-Factor GSR Model	360
10.1.2.3 Time-Stationarity and Caplet Hump	362
10.1.3 European Option Pricing	364
10.1.3.1 The Jamshidian Decomposition	365
10.1.3.2 Gaussian Swap Rate Approximation	366
10.1.4 Swaption Calibration	367
10.1.5 Finite Difference Methods	368
10.1.5.1 PDE and Spatial Boundary Conditions	369
10.1.5.2 Determining Spatial Boundary Conditions from PDE	369
10.1.6 Monte Carlo Simulation	370
10.1.6.1 Exact Discretization	370
10.1.6.2 Approximate Discretization	372
10.1.6.3 Using Other Measures For Simulation	373
10.2 The Affine One-Factor Model	374
10.2.1 Basic Definitions	374
10.2.1.1 SDE	374
10.2.1.2 Regularity Issues	375
10.2.1.3 Volatility Skew	375
10.2.1.4 Time Dependent Parameters	375
10.2.2 Discount Bond Pricing and Extended Transform	376
10.2.2.1 Constant Parameters	377
10.2.2.2 Piecewise Constant Parameters	378
10.2.3 Discount Bond Calibration	379
10.2.3.1 Change of Variables	379
10.2.3.2 Algorithm for $\omega(t)$	380
10.2.4 European Option Pricing	381
10.2.5 Swaption Calibration	383
10.2.5.1 Basic Problem	383
10.2.5.2 Calibration Algorithm	383
10.2.6 Quadratic One-Factor Model	384

10.2.7	Numerical Methods for the Affine Short Rate Model ..	385
<b>11</b>	<b>One-Factor Short Rate Models II</b> .....	<b>387</b>
11.1	Log-Normal Short Rate Models .....	387
11.1.1	The Black-Derman-Toy Model .....	387
11.1.2	Black-Karasinski Model .....	388
11.1.3	Issues in Log-Normal Models .....	389
11.1.4	Sandmann-Sondermann Transformation .....	390
11.2	Other Short Rate Models .....	392
11.2.1	Power-Type Models and Empirical Model Estimation .	392
11.2.2	The Black Shadow Rate Model.....	393
11.2.3	Spanned and Unspanned Stochastic Volatility: the Fong and Vasicek Model .....	394
11.3	Numerical Methods for General One-Factor Short Rate Models	396
11.3.1	Finite Difference Methods .....	396
11.3.2	Calibration to Initial Yield Curve .....	397
11.3.2.1	Forward Induction.....	398
11.3.2.2	Forward-from-Backward Induction.....	399
11.3.2.3	Volatility Calibration .....	401
11.3.2.4	The Dybvig Parameterization .....	403
11.3.2.5	The Link to HJM Models .....	404
11.3.2.6	The Hagan and Woodward Parameterization	405
11.3.3	Monte Carlo Simulation .....	408
11.3.3.1	SDE Discretization .....	408
11.3.3.2	Practical Issues with Monte Carlo Methods	409
11.A	Appendix: Markov-Functional Models .....	410
11.A.1	State Process and Numeraire Mapping .....	410
11.A.2	Libor MF Parameterization .....	412
11.A.3	Swap MF Parameterization .....	413
11.A.4	Non-Parametric Calibration .....	414
11.A.5	Numerical Implementation .....	415
11.A.6	Comments and Comparisons .....	415
<b>12</b>	<b>Multi-Factor Short Rate Models</b> .....	<b>417</b>
12.1	The Gaussian Model .....	418
12.1.1	Development from Separability Condition .....	418
12.1.1.1	Mean-Reverting State Variables .....	419
12.1.1.2	Further Changes of Variables .....	422
12.1.2	Classical Development .....	424
12.1.2.1	Diagonalization of Mean Reversion Matrix .	425
12.1.3	Correlation Structure .....	426
12.1.4	The Two-Factor Gaussian Model .....	427
12.1.4.1	Some Basics .....	427
12.1.4.2	Variance and Correlation Structure .....	428
12.1.4.3	Volatility Hump.....	429
12.1.4.4	Another Formulation of the Two-Factor Model .....	430
12.1.5	Multi-Factor Statistical Gaussian Model.....	433
12.1.6	Swaption Pricing .....	437

12.1.6.1	Two-Dimensional Jamshidian Decomposition . . . . .	437
12.1.6.2	Gaussian Swap Rate Approximation . . . . .	441
12.1.7	Calibration and Parameterization via Benchmark Rates	442
12.1.8	Monte Carlo Simulation . . . . .	444
12.1.9	Finite Difference Methods . . . . .	445
12.2	The Affine Model . . . . .	446
12.2.1	Introduction . . . . .	446
12.2.2	Basic Model . . . . .	446
12.2.3	Regularity Issues . . . . .	448
12.2.4	Discount Bond Prices . . . . .	449
12.2.5	Some Concrete Models . . . . .	450
12.2.5.1	Fong-Vasicek Model . . . . .	450
12.2.5.2	Longstaff-Schwartz Model . . . . .	451
12.2.5.3	$d$ -Factor CIR Models . . . . .	452
12.2.6	Brief Notes on Option Pricing . . . . .	453
12.3	The Quadratic Gaussian Model . . . . .	453
12.3.1	Quadratic Gaussian Models are Affine . . . . .	454
12.3.2	The Basics . . . . .	454
12.3.3	Parameterization . . . . .	457
12.3.3.1	Smile Generation . . . . .	457
12.3.3.2	Quadratic Term . . . . .	458
12.3.3.3	Linear Term . . . . .	459
12.3.4	Swaption Pricing . . . . .	460
12.3.4.1	State Vector Distribution Under the Annuity Measure . . . . .	460
12.3.4.2	Exact Pricing of European Swaptions . . . . .	461
12.3.4.3	Approximations for European Swaptions . . . . .	462
12.3.5	Calibration . . . . .	465
12.3.6	Spanned Stochastic Volatility . . . . .	465
12.3.7	Numerical Methods . . . . .	466
12.A	Appendix: Quadratic Forms of Gaussian Vectors . . . . .	466
<b>13</b>	<b>The Quasi-Gaussian Model with Local and Stochastic Volatility . . . . .</b>	<b>471</b>
13.1	One-Factor Quasi-Gaussian Model . . . . .	471
13.1.1	Definition . . . . .	471
13.1.2	Local Volatility . . . . .	473
13.1.3	Swap Rate Dynamics . . . . .	473
13.1.4	Approximate Local Volatility Dynamics for Swap Rate	474
13.1.4.1	Simple Approximation . . . . .	475
13.1.4.2	Advanced Approximation . . . . .	476
13.1.5	Linear Local Volatility . . . . .	478
13.1.6	Linear Local Volatility for a Swaption Strip . . . . .	480
13.1.7	Volatility Calibration . . . . .	481
13.1.8	Mean Reversion Calibration . . . . .	483
13.1.8.1	Effects of Mean Reversion . . . . .	483
13.1.8.2	Calibrating Mean Reversion to Volatility Ratios . . . . .	485

13.1.8.3	Calibrating Mean Reversion to Inter-Temporal Correlations .....	487
13.1.8.4	Final Comments on Mean Reversion Calibration .....	488
13.1.9	Numerical Methods .....	489
13.1.9.1	Direct Integration .....	489
13.1.9.2	Finite Difference Methods .....	491
13.1.9.3	Monte Carlo Simulation .....	494
13.1.9.4	Single-State Approximations .....	494
13.2	One-Factor Quasi-Gaussian Model with Stochastic Volatility ..	497
13.2.1	Definition .....	498
13.2.2	Swap Rate Dynamics .....	499
13.2.3	Volatility Calibration .....	500
13.2.4	Mean Reversion Calibration .....	501
13.2.5	Non-Zero Correlation .....	501
13.2.6	PDE and Monte Carlo Methods .....	502
13.3	Multi-Factor Quasi-Gaussian Model .....	502
13.3.1	General Multi-Factor Model .....	502
13.3.2	Local and Stochastic Volatility Parameterization .....	503
13.3.3	Swap Rate Dynamics and Approximations .....	506
13.3.4	Volatility Calibration .....	510
13.3.5	Numerical Schemes and other Topics .....	510
13.A	Appendix: Density Approximation .....	511
13.A.1	Simplified Forward Measure Dynamics .....	511
13.A.2	Effective Volatility .....	513
13.A.3	The Forward Equation for Call Options .....	513
13.A.4	Asymptotic Expansion .....	514
13.A.5	Proof of Theorem 13.1.14 .....	515
<b>14</b>	<b>The Libor Market Model I .....</b>	<b>517</b>
14.1	Introduction and Setup .....	518
14.1.1	Motivation and Historical Notes .....	518
14.1.2	Tenor Structure .....	518
14.2	LM Dynamics and Measures .....	519
14.2.1	Setting .....	519
14.2.2	Probability Measures .....	520
14.2.3	Link to HJM Analysis .....	522
14.2.4	Separable Deterministic Volatility Function .....	523
14.2.5	Stochastic Volatility .....	525
14.2.6	Time-Dependence in Model Parameters .....	527
14.3	Correlation .....	528
14.3.1	Empirical Principal Components Analysis .....	529
14.3.1.1	Example: USD Forward Rates .....	529
14.3.2	Correlation Estimation and Smoothing .....	530
14.3.2.1	Example: Fit to USD data .....	533
14.3.3	Negative Eigenvalues .....	533
14.3.4	Correlation PCA .....	534
14.3.4.1	Example: USD Data .....	536
14.3.4.2	Poor Man's Correlation PCA .....	537

14.4	Pricing of European Options .....	538
14.4.1	Caplets .....	538
14.4.2	Swaptions .....	539
14.4.3	Spread Options .....	542
14.4.3.1	Term Correlation .....	542
14.4.3.2	Spread Option Pricing .....	543
14.5	Calibration .....	544
14.5.1	Basic Principles .....	544
14.5.2	Parameterization of $\ \lambda_k(t)\ $ .....	544
14.5.3	Interpolation on the Whole Grid .....	545
14.5.4	Construction of $\lambda_k(t)$ from $\ \lambda_k(t)\ $ .....	546
14.5.4.1	Covariance PCA .....	547
14.5.4.2	Correlation PCA .....	548
14.5.4.3	Discussion and Recommendation .....	548
14.5.5	Choice of Calibration Instruments .....	549
14.5.6	Calibration Objective Function .....	551
14.5.7	Sample Calibration Algorithm .....	553
14.5.8	Speed-Up Through Sub-Problem Splitting .....	554
14.5.9	Correlation Calibration to Spread Options .....	555
14.5.10	Volatility Skew Calibration .....	557
14.6	Monte Carlo Simulation .....	557
14.6.1	Euler-Type Schemes .....	558
14.6.1.1	Analysis of Computational Effort .....	559
14.6.1.2	Long Time Steps .....	560
14.6.1.3	Notes on the Choice of Numeraire .....	561
14.6.2	Other Simulation Schemes .....	562
14.6.2.1	Special-Purpose Schemes with Drift Predictor-Corrector .....	562
14.6.2.2	Euler Scheme with Predictor-Corrector ...	563
14.6.2.3	Lagging Predictor-Corrector Scheme .....	563
14.6.2.4	Further Refinements of Drift Estimation ...	565
14.6.2.5	Brownian-Bridge Schemes and Other Ideas	566
14.6.2.6	High-Order Schemes .....	568
14.6.3	Martingale Discretization .....	568
14.6.3.1	Deflated Bond Price Discretization .....	569
14.6.3.2	Comments and Alternatives .....	571
14.6.4	Variance Reduction .....	571
14.6.4.1	Antithetic Sampling .....	571
14.6.4.2	Control Variates .....	572
14.6.4.3	Importance Sampling .....	572
15	<b>The Libor Market Model II</b> .....	575
15.1	Interpolation .....	575
15.1.1	Back Stub, Simple Interpolation .....	576
15.1.2	Back Stub, Arbitrage-Free Interpolation .....	577
15.1.3	Back Stub, Interpolation Inspired by the Gaussian Model .....	578
15.1.4	Front Stub, Zero Volatility .....	580
15.1.5	Front Stub, Exogenous Volatility .....	581

## XXIV Preface

15.1.6	Front Stub, Simple Interpolation .....	583
15.1.7	Front Stub, Interpolation Inspired by the Gaussian Model .....	584
15.2	Advanced Approximations for Swaption Pricing via Markovian Projection .....	584
15.2.1	Advanced Formula for Swap Rate Volatility .....	587
15.2.2	Advanced Formula for Swap Rate Skew .....	588
15.2.3	Skew and Smile Calibration in LM Models .....	590
15.3	Near-Markov LM Models .....	592
15.4	Swap Market Models .....	592
15.5	Evolving Separate Discount and Forward Rate Curves .....	594
15.5.1	Basic Ideas .....	594
15.5.2	HJM Extension .....	595
15.5.3	Applications to LM Models .....	598
15.5.4	Deterministic Spread .....	600
15.6	SV Models with Non-Zero Correlation .....	601
15.7	Multi-Stochastic Volatility Extensions .....	603
15.7.1	Introduction .....	603
15.7.2	Setup .....	604
15.7.3	Pricing Caplets and Swaptions .....	605
15.7.4	Spread Options .....	605
15.7.5	Another Use of Multi-Dimensional Stochastic Volatility .....	606

---

## VOLUME III. Products and Risk Management

---

### Part IV Products

---

<b>16</b>	<b>Single-Rate Vanilla Derivatives</b>	609
16.1	European Swaptions	609
16.1.1	Smile Dynamics	610
16.1.2	Adjustable Backbone	611
16.1.3	Stochastic Volatility Swaption Grid	613
16.1.4	Calibrating Stochastic Volatility Model to Swaptions	614
16.1.5	Some Other Interpolation Rules	616
16.2	Caps and Floors	616
16.2.1	Basic Problem	617
16.2.2	Setup and Norms	617
16.2.3	Calibration Procedure	619
16.3	Terminal Swap Rate Models	619
16.3.1	TSR Basics	620
16.3.2	Linear TSR Model	621
16.3.3	Exponential TSR Model	623
16.3.4	Swap-Yield TSR Model	625
16.4	Libor-in-Arrears	625
16.5	Libor-with-Delay	628
16.5.1	Swap-Yield TSR Model	629
16.5.2	Other Terminal Swap Rate Models	629
16.5.3	Approximations Inspired by Term Structure Models	630
16.5.4	Applications to Averaging Swaps	631
16.6	CMS and CMS-Linked Cash Flows	631
16.6.1	The Replication Method for CMS	632
16.6.2	Annuity Mapping Function as a Conditional Expected Value	634
16.6.3	Swap-Yield TSR Model	635
16.6.4	Linear and Other TSR Models	636
16.6.5	The Quasi-Gaussian Model	638
16.6.6	The Libor Market Model	639
16.6.7	Correcting Non-Arbitrage-Free Methods	641
16.6.8	Impact of Annuity Mapping Function and Mean Reversion	642
16.6.9	CDF and PDF of CMS Rate in Forward Measure	642
16.6.10	SV Model for CMS Rate	645
16.6.11	Dynamics of CMS Rate in Forward Measure	647
16.6.12	Cash-Settled Swaptions	649
16.7	Quanto CMS	651
16.7.1	Overview	651
16.7.2	Modeling the Joint Distribution of Swap Rate and Forward Exchange Rate	653

16.7.3	Normalizing Constant and Final Formula . . . . .	654
16.8	Eurodollar Futures . . . . .	654
16.8.1	Fundamental Results on Futures . . . . .	655
16.8.2	Motivations and Plan . . . . .	657
16.8.3	Preliminaries . . . . .	657
16.8.4	Expansion Around the Futures Value . . . . .	658
16.8.5	Forward Rate Variances . . . . .	661
16.8.6	Forward Rate Correlations . . . . .	662
16.8.7	The Formula . . . . .	663
16.9	Convexity and Moment Explosions . . . . .	664
<b>17</b>	<b>Multi-Rate Vanilla Derivatives . . . . .</b>	<b>669</b>
17.1	Introduction to Multi-Rate Vanilla Derivatives . . . . .	669
17.2	Marginal Distributions and Reference Measure . . . . .	670
17.3	Dependence Structure via Copulas . . . . .	672
17.3.1	Introduction to Gaussian Copula Method . . . . .	672
17.3.2	General Copulas . . . . .	673
17.3.3	Archimedean Copulas . . . . .	675
17.3.4	Making Copulas from Other Copulas . . . . .	676
17.4	Copula Methods for CMS Spread Options . . . . .	678
17.4.1	Normal Model for the Spread . . . . .	679
17.4.2	Gaussian Copula for Spread Options . . . . .	680
17.4.3	Spread Volatility Smile Modeling with the Power Gaussian Copula . . . . .	682
17.5	Rates Observed at Different Times . . . . .	683
17.6	Numerical Methods for Copulas . . . . .	685
17.6.1	Numerical Integration Methods . . . . .	686
17.6.2	Dimensionality Reduction for CMS Spread Options . . . . .	688
17.6.3	Dimensionality Reduction for Other Multi-Rate Derivatives . . . . .	690
17.6.4	Dimensionality Reduction by Conditioning . . . . .	691
17.6.5	Dimensionality Reduction by Measure Change . . . . .	695
17.6.6	Monte Carlo Methods . . . . .	696
17.7	Limitations of the Copula Method . . . . .	698
17.8	Stochastic Volatility Modeling for Multi-Rate Options . . . . .	699
17.8.1	Measure Change by Drift Adjustment . . . . .	700
17.8.2	Measure Change by CMS Caplet Calibration . . . . .	700
17.8.3	Impact of Correlations on the Spread Smile . . . . .	702
17.8.4	Connection to Term Structure Models . . . . .	703
17.9	CMS Spread Options in Term Structure Models . . . . .	703
17.9.1	Libor Market Model . . . . .	705
17.9.2	Quadratic Gaussian Model . . . . .	706
17.A	Appendix: Implied Correlation in Displaced Log-Normal Models . . . . .	707
17.A.1	Preliminaries . . . . .	707
17.A.2	Implied Log-Normal Correlation . . . . .	708
17.A.3	A Few Numerical Results . . . . .	709

<b>18</b>	<b>Callable Libor Exotics</b>	711
18.1	Model Calibration for Callable Libor Exotics	711
18.1.1	Risk Factors for CLEs	712
18.1.2	Model Choice and Calibration	714
18.2	Valuation Theory	715
18.2.1	Preliminaries	715
18.2.2	Recursion for Callable Libor Exotics	716
18.2.3	Marginal Exercise Value Decomposition	717
18.3	Monte Carlo Valuation	718
18.3.1	Regression-Based Valuation of CLEs, Basic Scheme	718
18.3.2	Regression for Underlying	720
18.3.3	Valuing CLE as a Cancelable Note	721
18.3.4	Using Regressed Variables for Decision Only	723
18.3.5	Regression Valuation with Boundary Optimization	724
18.3.6	Lower Bound via Regression Scheme	725
18.3.7	Iterative Improvement of Lower Bound	727
18.3.8	Upper Bound	729
18.3.8.1	Basic Ideas	729
18.3.8.2	Nested Simulation (NS) Algorithm	730
18.3.8.3	Bias and Computational Cost of NS Algorithm	733
18.3.8.4	Confidence Intervals and Practical Usage	734
18.3.8.5	Non-Analytic Exercise Values	735
18.3.8.6	Improvements to NS Algorithm	737
18.3.8.7	Other Upper Bound Algorithms	739
18.3.9	Regression Variable Choice	740
18.3.9.1	State Variables Approach	740
18.3.9.2	Explanatory Variables	741
18.3.9.3	Explanatory Variables with Convexity	743
18.3.10	Regression Implementation	745
18.3.10.1	Automated Explanatory Variable Selection	746
18.3.10.2	Suboptimal Point Exclusion	747
18.3.10.3	Two Step Regression	748
18.3.10.4	Robust Implementation of Regression Algorithm	749
18.4	Valuation with Low-Dimensional Models	752
18.4.1	Single-Rate Callable Libor Exotics	752
18.4.2	Calibration Targets for the Local Projection Method	753
18.4.3	Review of Suitable Local Models	754
18.4.4	Defining a Suitable Analog for Core Swap Rates	755
18.4.5	PDE Methods for Path-Dependent CLEs	757
18.4.5.1	CLEs Accreting at Coupon Rate	757
18.4.5.2	Snowballs	759

<b>19</b>	<b>Bermudan Swaptions</b>	761
19.1	Definitions	761
19.2	Local Projection Method	762
19.3	Smile Calibration	763
19.4	Amortizing, Accreting, and Other Non-Standard Bermudan Swaptions	765
19.4.1	Relationship Between Non-Standard and Standard Swap Rates	767
19.4.2	Same-Tenor Approach	768
19.4.3	Representative Swaption Approach	768
19.4.4	Basket Approach	771
19.4.5	Super-Replication for Non-Standard Bermudan Swaptions	774
19.4.6	Zero Coupon Bermudan Swaptions	777
19.4.7	American Swaptions	778
19.4.7.1	American Swaptions vs. High-Frequency Bermudan Swaptions	779
19.4.7.2	The Proxy Libor Rate Method	780
19.4.7.3	The Libor-as-Extra-State Method	781
19.4.8	Mid-Coupon Exercise	782
19.5	Flexi-Swaps	783
19.5.1	Purely Global Bounds	784
19.5.2	Purely Local Bounds	784
19.5.3	Marginal Exercise Value Decomposition	785
19.5.4	Narrow Band Limit	786
19.6	Monte Carlo Valuation	787
19.6.1	Regression Methods	787
19.6.2	Parametric Boundary Methods	788
19.6.2.1	Sample Exercise Strategies for Bermudan Swaptions	788
19.6.2.2	Some Numerical Tests	791
19.6.2.3	Additional Comments	793
19.7	Other Topics	793
19.7.1	Robust Bermudan Swaption Hedging with European Swaptions	793
19.7.2	Carry and Exercise	796
19.7.3	Fast Pricing via Exercise Premia Representation	797
19.A	Appendix: Forward Volatility and Correlation	800
19.B	Appendix: A Primer on Moment Matching	801
19.B.1	Basics	801
19.B.2	Example 1: Asian Option in BS Model	802
19.B.3	Example 2: Basket Option in BS Model	804
<b>20</b>	<b>TARNS, Volatility Swaps, and Other Derivatives</b>	805
20.1	TARNS	805
20.1.1	Definitions and Examples	805
20.1.2	Valuation and Risk with Globally Calibrated Models	806
20.1.3	Local Projection Method	807
20.1.4	Volatility Smile Effects	809

20.1.5	PDE for TARNs .....	810
20.2	Volatility Swaps .....	812
20.2.1	Local Projection Method .....	813
20.2.2	Shout Options .....	813
20.2.3	Min-Max Volatility Swaps .....	816
20.2.4	Impact of Volatility Dynamics on Volatility Swaps ....	818
20.3	Forward Swaption Straddles .....	823
<b>21</b>	<b>Out-of-Model Adjustments .....</b>	<b>829</b>
21.1	Adjusting the Model .....	830
21.1.1	Calibration to Coupons .....	830
21.1.2	Adjusters .....	831
21.1.3	Path Re-Weighting .....	833
21.1.4	Proxy Model Method .....	838
21.1.5	Asset-Based Adjustments .....	839
21.2	Adjusting the Market .....	841
21.3	Adjusting the Trade .....	842
21.3.1	Fee Adjustments .....	842
21.3.2	Fee Adjustment Impact on Exotic Derivatives .....	843
21.3.3	Strike Adjustment .....	844

---

## Part V Risk Management

---

<b>22</b>	<b>Introduction to Risk Management .....</b>	<b>849</b>
22.1	Risk Management and Sensitivity Computations .....	849
22.1.1	Basic Information Flow .....	849
22.1.2	Risk: Theory and Practice .....	851
22.1.3	Example: the Black-Scholes Model .....	853
22.1.4	Example: Black-Scholes Model with Time-Dependent Parameters .....	856
22.1.5	Actual Risk Computations .....	857
22.1.6	What about $\Theta_{\text{prm}}$ and $\Theta_{\text{num}}$ ? .....	859
22.1.7	A Note on Trading P&L and the Computation of Implied Volatility .....	859
22.2	P&L Analysis .....	862
22.2.1	P&L Predict .....	863
22.2.2	P&L Explain .....	865
22.2.2.1	Waterfall Explain .....	865
22.2.2.2	Bump-and-Reset Explain .....	866
22.3	Value-at-Risk .....	867
22.A	Appendix: Alternative Proof of Lemma 22.1.1 .....	869
<b>23</b>	<b>Payoff Smoothing and Related Methods .....</b>	<b>871</b>
23.1	Issues with Discretization Schemes .....	871
23.1.1	Problems with Grid Dimensioning .....	872
23.1.2	Grid Shifts Relative to Payout .....	872
23.1.3	Additional Comments .....	874
23.2	Basic Techniques .....	875

23.2.1	Adaptive Integration . . . . .	875
23.2.2	Adding Singularities to the Grid . . . . .	876
23.2.3	Singularity Removal . . . . .	878
23.2.4	Partial Analytical Integration . . . . .	879
23.3	Payoff Smoothing For Numerical Integration and PDEs . . . . .	880
23.3.1	Introduction to Payoff Smoothing . . . . .	881
23.3.2	Payoff Smoothing in One Dimension . . . . .	882
23.3.2.1	Box Smoothing . . . . .	883
23.3.2.2	Other Smoothing Methods . . . . .	886
23.3.3	Payoff Smoothing in Multiple Dimensions . . . . .	887
23.4	Payoff Smoothing for Monte Carlo . . . . .	889
23.4.1	Tube Monte Carlo for Digital Options . . . . .	889
23.4.2	Tube Monte Carlo for Barrier Options . . . . .	891
23.4.3	Tube Monte Carlo for Callable Libor Exotics . . . . .	895
23.4.4	Tube Monte Carlo for TARNs . . . . .	896
23.A	Appendix: Delta Continuity of Singularity-Enlarged Grid Method . . . . .	897
23.B	Appendix: Proof of Approximate Conditional Independence for Tube Monte Carlo . . . . .	898
<b>24</b>	<b>Pathwise Differentiation . . . . .</b>	<b>901</b>
24.1	Pathwise Differentiation: Foundations . . . . .	901
24.1.1	Callable Libor Exotics . . . . .	901
24.1.1.1	CLE Greeks . . . . .	902
24.1.1.2	Keeping the Exercise Time Constant . . . . .	904
24.1.1.3	Noise in CLE Greeks . . . . .	905
24.1.2	Barrier Options . . . . .	906
24.2	Pathwise Differentiation for PDE Based Models . . . . .	909
24.2.1	Model and Setup . . . . .	909
24.2.2	Bucketed Deltas . . . . .	910
24.2.3	Survival Density . . . . .	913
24.3	Pathwise Differentiation for Monte Carlo Based Models . . . . .	915
24.3.1	Pathwise Derivatives of Forward Libor Rates . . . . .	915
24.3.2	Pathwise Deltas of European Options . . . . .	918
24.3.2.1	Pathwise Deltas of the Numeraire . . . . .	918
24.3.2.2	Pathwise Deltas of the Payoff . . . . .	919
24.3.3	Adjoint Method For Greeks Calculation . . . . .	920
24.3.4	Pathwise Delta Approximation for Callable Libor Exotics . . . . .	921
24.4	Notes on Likelihood Ratio and Hybrid Methods . . . . .	923
<b>25</b>	<b>Importance Sampling and Control Variates . . . . .</b>	<b>925</b>
25.1	Importance Sampling In Short Rate Models . . . . .	925
25.2	Payoff Smoothing by Importance Sampling in TARNs and General Barrier Options . . . . .	927
25.2.1	Binary Options . . . . .	927
25.2.2	TARNs . . . . .	929
25.2.3	Removing the First Digital . . . . .	929

25.2.4	Smoothing All Digitals by One-Step Survival Conditioning . . . . .	931
25.2.5	Simulating Under the Survival Measure Using Conditional Gaussian Draws . . . . .	933
25.2.6	Generalized Trigger Products in Multi-Factor LM Models . . . . .	935
25.3	Model-Based Control Variates . . . . .	937
25.3.1	Low-Dimensional Markov Approximation for LM models . . . . .	938
25.3.2	Two-Dimensional Extension . . . . .	940
25.3.3	Approximating Volatility Structure . . . . .	942
25.3.4	Markov Approximation as a Control Variate . . . . .	944
25.4	Instrument-Based Control Variates . . . . .	945
25.5	Dynamic Control Variates . . . . .	949
25.6	Control Variates and Risk Stability . . . . .	951
<b>26</b>	<b>Vegas in Libor Market Models . . . . .</b>	<b>953</b>
26.1	Basic Problem of Vega Computations . . . . .	953
26.2	Review of Calibration . . . . .	955
26.3	Vega Calculation Methods . . . . .	956
26.3.1	Direct Vega Calculations . . . . .	956
26.3.1.1	Definition and Analysis . . . . .	956
26.3.1.2	Numerical Example . . . . .	958
26.3.2	What is a Good Vega? . . . . .	960
26.3.3	Indirect Vega Calculations . . . . .	962
26.3.3.1	Definition and Analysis . . . . .	962
26.3.3.2	Numerical Example and Performance Analysis . . . . .	964
26.3.4	Hybrid Vega Calculations . . . . .	967
26.3.4.1	Definition and Analysis . . . . .	967
26.3.4.2	Numerical Example . . . . .	969
26.4	Skew and Smile Vegas . . . . .	970
26.5	Vegas and Correlations . . . . .	971
26.5.1	Term Correlation Effects . . . . .	971
26.5.2	What Correlations should be kept Constant? . . . . .	972
26.5.3	Vegas with Fixed Term Correlations . . . . .	973
26.5.4	Numerical Example . . . . .	975
26.6	Deltas with Backbone . . . . .	975
26.7	Vega Projections . . . . .	977
26.8	Some Final Notes on Computing Model Vegas . . . . .	979

## Appendix

---

<b>A</b>	<b>Markovian Projection . . . . .</b>	<b>983</b>
A.1	Marginal Distributions of Ito Processes . . . . .	983
A.2	Approximations for Conditional Expected Values . . . . .	987
A.2.1	Gaussian Approximation . . . . .	988
A.2.2	Least-Squares Projection . . . . .	989

## XXXII Preface

A.3	Applications to Local Stochastic Volatility Models . . . . .	990
A.3.1	Markovian Projection onto a Stochastic Volatility Model . . . . .	990
A.3.2	Fitting the Market with a Local Stochastic Volatility Model . . . . .	992
A.3.3	On Calculating Proxy Local Volatility . . . . .	995
A.4	Basket Options in Local Volatility Models . . . . .	997
A.5	Basket Options in Stochastic Volatility Models . . . . .	1000
A.A	Appendix: Approximations for $E(\sqrt{z_n(t)z_m(t)})$ and $E(\sqrt{z_n(t)})$ . . . . .	1003
A.A.1	Proof of Proposition A.A.1 . . . . .	1005
A.A.1.1	Step 1. Reduction to Covariance . . . . .	1005
A.A.1.2	Step 2. Linear Approximation To Volatility . . . . .	1005
A.A.1.3	Step 3. Coefficients of the Linear Approximation . . . . .	1006
A.A.1.4	Step 4. Order of Approximation . . . . .	1006
A.A.2	Proof of Lemma A.A.2 . . . . .	1006
